

Data Structures and Algorithms - Assignment 5

1. Modify the insertion sort algorithm to sort the array in descending order
2. Leetcode : <https://leetcode.com/problems/find-first-and-last-position-of-element-in-sorted-array/description/>
3. Leetcode problem : <https://leetcode.com/problems/search-insert-position/description/>
4. Leetcode Problem : <https://leetcode.com/problems/merge-sorted-array/description/>
5. <https://leetcode.com/problems/kth-largest-element-in-an-array/description>

Optional

6. Write a menu driven program to perform operations on linked list. Also provide option for undo and redo. At any moment if you do undo, last operation performed on linked list should rollback. Your application should support at least 5 undo and redo operations.
