

Data Structures and Algorithms - Assignment 6

1. Write recursive functions to add node into BST.
2. Write recursive function to perform binary search in BST.
3. Write a function to return level/depth of given node in a BST.
4. Count occurrences of each word in a line/file.
5. Calculate the mode of an array. The mode is the element occurred maximum time in the array.

Optional

6. Implement non recursive preorder, inorder and postorder traversals.
7. <https://leetcode.com/problems/merge-two-sorted-lists>
8. Leetcode Problem : <https://leetcode.com/problems/validate-binary-search-tree/description/>
9. <https://leetcode.com/problems/two-sum> (solve using hashMap)
10. <https://leetcode.com/problems/contains-duplicate>
