

1. Create a new database named **CDAC** and connect to it.
2. Display the list of collections in the **CDAC** database.
3. Create a collection named **LIBRARY**.
4. Insert a document into **LIBRARY** with:
title: *MongoDB programming*, author: *Amit*, likes: 100
5. Display the inserted document and note the `_id` field.
6. Insert another document into **LIBRARY** with:
title: *MySQL programming*, authors: [Jack, Jill], likes: 200
7. Display all documents in the **LIBRARY** collection.
8. Display only the first inserted document.
9. Display documents using the `pretty()` method.
10. Update the document where author = *Amit* to *Amit Sharma*.
11. Delete all documents with likes = 100.
12. Drop the **LIBRARY** collection.
13. Drop the **CDAC** database.
